

IN THE SPECIFICATION

Please amend the specification as follows. A copy of an APPENDIX OF MARKED-UP SPECIFICATION is attached hereto.

Page 1, after the title of the invention and before the beginning of the first paragraph, please insert the following title:

A<sup>1</sup> --BACKGROUND OF THE INVENTION--.

Page 1, lines 1-6 (first paragraph), please amend as follows:

A<sup>2</sup> --This invention relates to a mobile radio system having a plurality of mobile terminals connected with a mobile switching center via an air interface for communication control and optionally for billing. In addition the invention relates to a method for operating mobile terminals of a mobile radio system.--

Page 2, lines 4-8, delete these paragraphs in their entirety.

Page 2, between lines 8 and 9 (before the beginning of the 4<sup>th</sup> paragraph), please insert the following title:

A<sup>3</sup> --SUMMARY OF THE INVENTION--.

Page 2, lines 9-23 (4<sup>th</sup> and 5<sup>th</sup> paragraphs), please amend these paragraphs as follows:

A<sup>4</sup> --A mobile radio system is provided wherein the subscriber identity module used for controlling the mobile terminals contains a calculation rule for calculating at least one further identity from the stored identity. Identities generated in accordance with the calculation rule are associated accordingly in the mobile switching center. An alternative for solving the abovementioned problem is to design the subscriber identify module so as to permit generation of a request signal which is transmitted to the mobile

switching center and processed there, whereupon an alternative identity is communicated to the subscriber identity module via the air interface.

A<sup>4</sup>  
*concl'd*  
The advantage of the present invention is that one need not store all identities on the chip card, i.e., the subscriber identity module. This makes the system more flexible to handle since the additional identities can be assigned after the card is issued to the user, i.e. after he has applied for the connection. It is thus possible for the owner of a mobile phone having an associated identity to obtain a second identity at a later time without a new card having to be issued.--
